APPLICANT: Siegel, Donald L.

TITLE OF INVENTION: Rh(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL
TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF
FILE REFERENCE: 09596-42U2
CURRENT PELICATION NUMBER: US/09/240,274
CURRENT FILING DATE: 1999-01-29
EARLIER APPLICATION NUMBER: 60/081,380
EARLIER APPLICATION NUMBER: 60/081,380
EARLIER APPLICATION NUMBER: 60/081,50
EARLIER FILING DATE: 1998-04-10
EARLIER FILING DATE: 1996-01-01
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  66 TIGCCGGGCGGAGTCAGGAATTATTTAGCCTGGTATCAGCAGAAACCAGGGAA

Patent No. 625455

GENERAL INFORMATION:

APPLICANT: Siegel, Donald L.

TITLE OF INVENTION: Rh(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL

TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF

TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF

FILE REFRENCE: 09596-4202

CURRENT APPLICATION NUMBER: US/09/240,274

CURRENT FILING DATE: 1999-01-29

EARLIER APPLICATION NUMBER: 60/081,380

EARLIER APPLICATION NUMBER: 60/081,380

EARLIER APPLICATION NUMBER: 60/081,380

EARLIER PILING DATE: 1996-10-11

NUMBER OF SEQ ID NOS: 224

NUMBER OF SEQ ID NOS: 224

APPLICANT: Siegel, Donald L.
TITLE OF INVENTION: RA(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL
TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF
FILE REFERENCE: 09596-42U2
CURRENT APPLICATION NUMBER: US/09/240,274
CURRENT FILING DATE: 1999-01-29
EARLIER FILING DATE: 1999-01-29

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                   Gaps
                             New gene encoding for antibody to Pseudomonas aeruginosa exotoxin plus recombinant vectors and host cells, useful for treating infections.
                                                                                      Sequence encodes variable region of light chain of anti-exotoxin antibody. It encodes the same protein sequence as AAN80498 except that the signal sequence of AAN80498 contains an intron. See also AAN80495-N806496, AAN80498 and AAN80491-2.

Genomic DNA was isolated from the Epstein Barr virus-transformed human cell line FK001, fragmented and a gene library constructed. The library was screened with H or L chain probes and positive clones were identified including lambda gFK1. This clone contained an 11.58b insert encoding the V and C regions of Kappa chain. ECORI digested vector pSV2neo was end-filled and then blunt-end ligated to a Sall linker to form pSV2neoSall. This plasmid and pSV2neoGFK1 which was itself digested with Sall and ligated together to form pSV2neoGFK1 which was itself digested with Pvul. The plasmid was used to transform mouse myeloma cells which then expressed the antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pseudomonas aeruginosa; anti-exotoxin antibody; L chain; V region;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Encodes V.region of L chain of anti-P.aeruginosa exotoxin Ab #1.

The Blymphocyte fraction was incubated for 20 hrs with Epstein-Barr virus, then cloned by limiting dilution and tested for immunoadherence. Clones producing antibodies reactive with the UCLA-SO-M12 melanoma cell line were recloned 7 times in serum-free medium contg. growth factors. The resulting L612 is a B-lymphoblascoid cell line transformed by the Epstein-Barr virus. It is deposited at the ATCC under CRL 10724. Humab L612 binds to renal cell carcinomas. The DNA sequence of the variable regions for both the light and heavy chains of the L612 antibody were determined by PCR and are given in AAQ71717
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The invention provides a neuromodulatory agent (1) capable of promoting neurite outgrowth, regeneration, remyelination and neuroprotection in neurite outgrowth, regeneration, remyelination and neuroprotection in promoting callular proliferation of glial cells, and promoting Ca2+ signaling with oligodendrocytes. An humanised antibody to (1) can be selected from antibody sHIGM22 (LYM 22), ebyHigh MSI19D10, eby High CB2bG8, AKCR4, CB21E12, CB21E7 or NSI19ES. (1) is useful for stimulating remyelination of CNS axons, stimulating proliferation of glial cells in CNS axons, or treating demyelinating disease of CNS of such therapy. (1) is capable of binding to structures and cells within CNS axons or treating demyelinating disease of CNS of a mouse infected with Strain DA of Theiler's murine encephalomyelitis (TMEV) or for treating a human being having multiple sclerosis, or a cural disease of CNS (TMEV) (1) is also useful for an in vitro method of stimulating the proliferation of glial cells from mixed cell culture.
                                                                                                                                                                                                                                                           Neuromodulatory; central nervous system; CNS; sHIGM22; LYM 22; AKJR4; ebvHigM MsI19D10; ebv HIgM CB2bG8; CB2iE12; CB2iE7; MSI19B5; virucide; antiparkinsonian; neuroprotective; nootropic; vulnerary; ds.

(I) is also useful for stimulating remyelination of CNS axons. The antibodies are useful for preventing infection by a bacterium, virus or like pathogen that causes demyelination or other neurodegenerative condition in a subject. Methods where (I) is administered to a patient are useful for treating multiple sclerosis, Parkinson's disease, Alzheimer's disease, amyotrophic lateral sclerosis (ALS), a viral demyelinating disease, CNS diseases, and other conditions in the CNS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               366
                                                                                                                                                                                                    human colon cancer antigens can have cytostatic, cardioactive, muscular, neuroprotective, immunomodulatory, gynaecological, gastrointestinal, vulnerary, nephrotropic, antiinfective and antibacterial activities, and can be used in gene therapy. The colon cancer antigen polymucleotides, proteins and antibodies to the proteins are useful for the prevention, treatment and diagnostics to the proteins are useful for the prevention, treatment and diagnostics of colon disorders, such as colon cancer. The polymucleotides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent diseases such as neural disorders, immune system disorders, muscular disorders, reproductive disorders, immune system disorders, wounds, renal disorders, infectious disorders, and cardiovascular disorders. AAC98774 to AAC98772 and AAB54007 represent sequences used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ATCAGCAGCCTGCAGGCTGAAGATGTGGCAGTTTATTACTGTCAGCAATATTATAGTACT 300
                                                                                                                                                                                                                  The invention relates to producing gene libraries, comprising immunoglobulin light and heavy variable region. The method involves selecting light chain that binds with the heavy chain product to produce a functional conformation, producing a gene library comprising a collection of these light chain variable genes, and combining with gene library of heavy chain variable genes. The method is used for production of gene and antibody libraries.
                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                             Producing gene libraries and antibody libraries, involves selecting a
light chain that binds to a heavy chain product to produce a functional
formation, and producing a gene library of the light chain variable

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The plasmid pATGFLAG was generated from pSCFVUHH (see AAQ45605) to incorporate a flag-coating sequence 3' to any human VH gene to be expressed contiguously with Hum4 VL. The plasmid pATGFLAG, when digested with XhoI and Nhe I and purified becomes the human cH discovery plasmid contg. Hum4 VL in this SCFV format. pSC49FLAG contains murine antibody CC49VH inserted into sites of XhoI - hold purpose of pATDFLAG. It was evaluated for biological activity with the purpose of serving as a positive control for the FLAG assay
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to producing humanized anti-tumor associated sialylated glycoprotein (TAG-72) antibodies (anti-TAG). The antibodies have binding specificity for the cancer antigen TAG-72. These antibodies have variable regions with VL segments derived from human subgroup IV germline gene and a VH segment (encoded by the VHalphaTAG germline gene) which is capapble of combining with the VL to form a threee dimensional structure having the ability to bind TAG-72. They can be used for the in vivo detection of carcinoma Tesons. They can also be used for the in vivo diagnostics. They can also be used for in vitro diagnostics. They can also be used for in vitro radionuclide, drug, biological response modifier, toxin or another antibody for the treatment of cancers. The humanized anti-TAG-72 antibodies can reduce harmful anti-mouse antibody hypersensitivity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
